

Description

The LIS system creates and delivers an electronic lab result message to the EHR-S. The EHR-S receives and incorporates the message. These test plans are designed to test capability to process maximally populated message (all the elements defined in the implementation guide) as well as the progression from a "final" to "corrected" report.

PreCondition

Patient information is pre-loaded in the EHR-S.
No other Pre-Condition.

PostCondition

The test message information received by the EHR-S has been incorporated with the patient's record.

TestObjectives

- Demonstrate capability to support maximally populated messages - all supported (R,RE,C(a/b)) elements including multiple occurrences of repeating elements.
- Demonstrate ability to import and incorporate a final and corrected results message.
