

#### Description

Century Hospital's LIS transmits an accept acknowledgement message to Dr Radon's EHR-S which indicates the Application Acknowledgement message has been successfully received.

#### Comments

This is the initial "smoke testing" to reveal simple failures of the acknowledgment message severe enough to preclude further testing.

#### PreCondition

Patient information is pre-loaded in the EHR-S.  
No other Pre-Condition.

#### PostCondition

No Post-Condition.

#### TestObjectives

- Minimally populated message.
- Demonstrate ability to import and incorporate all required data elements for the accept acknowledgement test case:
- Minimally populated MSH Segment - Demonstrate the capability to support the minimally required data elements in the MSH segment.
- Minimally populated MSA Segment - Demonstrate the capability to support the minimally required data elements in the MSA segment.

#### Notes to Testers

To support real-time dynamic testing, the Tester at their discretion, may selectively modify result acknowledgement data prior to importing the test message into the EHR technology.
