The EHR system receives and incorporates an electronic lab result message. This test plan and the previous test plan are designed to test the
EHR-S' capability to process the progression from a "preliminary" to "final" to "corrected" microbiology Culture and Sensitivity reports.

Description-

PreCondition	_
No Pre-condition.	
PostCondition—	_

## TestObjectives

• Demonstrate ability to create final and corrected result microbiology message when the filler order number uniquely identifies the test ordered. (FRU profiles).

No Post Condition.
