Description

The LIS system creates and delivers an electronic lab result message to the EHR-S. This test plan is designed to test the systems' capability to process the progression from a "final" to "wrong patient" report.

PreCondition

Patient information is pre-loaded in the EHR-S.
No other Pre-Condition.

PostCondition

The test message information received by the EHR-S has been incorporated with the patient's record.

TestObjectives

- Demonstrate ability to import and incorporate a final result message and handle report that the initial final result was sent for the wrong patient.
